Summary

B.Tech CSE (AI/ML) student at VIT Chennai with internship experience building deployed AI automation systems for logistics. Strong in Python, FastAPI, prompt engineering, workflow automation, and ML pipelines, with hands-on work across voice agents, route-pricing tools, and full-stack web applications.

Education

VIT Chennai 2023 – 2027
Bachelor of Technology in Computer Science (Artificial Intelligence and Machine Learning) **GPA: 8.68**

Experience

AI Automation Intern | DropTruck May 2026 – June 2026

- Worked on a deployed AI voice-agent system used in live logistics outreach calls, handling about 30% of call volume.
- Improved multilingual prompt flows for lead qualification, callback handling, alternate-contact collection, and structured call outcomes.
- Built automation around Exotel, Gemini Live, n8n, and Baserow to update lead status, retry pending calls, and queue follow-ups.
- Developed supporting tools for logistics route-price prediction and business lead ingestion using FastAPI, ML workflows, Playwright, and Excel imports.

Python/Django Developer Intern | Progressive Solution Jan 2026 – Mar 2026

- Developed full-stack features for an NDA-bound web application using Django, REST APIs, and responsive frontend components.
- Collaborated with the development team on backend integration, UI fixes, and production-oriented feature delivery.

Projects

AI Voice Agent for Logistics Calls | Python, Gemini Live, Exotel, n8n, Baserow

- Built a real-time phone-call bridge using Python WebSockets with audio resampling between Exotel 8 kHz streams and Gemini Live 16/24 kHz audio.
- Designed prompt and tool-calling flows for Tamil-first multilingual conversations, lead status classification, callback requests, and alternate phone-number capture.

Route Price Prediction Platform | Python, scikit-learn, FastAPI, Streamlit

- Built an ML pipeline to clean route data, engineer direction-sensitive features, train pricing models, and expose driver-rate quotes through FastAPI.
- Added cost breakdown logic for fuel, EMI, toll, wear and tear, and driver margin, with Streamlit UI support for quote review.

Expense Tracker | React, Node.js, Express, MongoDB, Tailwind CSS

- Built a full-stack MERN personal finance app with JWT authentication, MongoDB-backed income/expense CRUD, dashboard analytics with Recharts, and Excel report exports.
- Developed REST APIs with Express and Mongoose for user-scoped financial records, dashboard aggregation, and Multer-based profile image uploads.

Skills

Languages: Python, SQL, JavaScript, Java

AI/Automation: Prompt Engineering, LLM Workflows, n8n, WebSockets

Backend/ML: FastAPI, Django, Node.js, Express, REST APIs, scikit-learn, Streamlit

Tools: Git, Docker basics, MongoDB, Linux basics, React, Tailwind CSS

Certification

Generative AI Professional Certificate – IBM June 2025
Training in transformer architectures, LLM development, RAG workflows, Hugging Face, and LangChain.
